

In autumn 2003, the borehole B03-1 (633847.44 / 86524.66 / 4454.51) was drilled to 82 m depth by the Paul Scherrer Institut (Böhlert, 2005; Schwerzmann, 2006). Within this campaign the Laboratory of Hydraulics, Hydrology and Glaciology at the ETH Zürich and the Department of Geography of the University of Zurich have jointly investigated the englacial temperatures in autumn 2003 (17.9.2003) and spring 2004 (15.5.2004). The temperature at a depth of around 25
