

Table 1. Site-A borehole temperatures after the first 10 minutes at each depth (T10) and estimated stabilized ice temperatures (Ts). 10 minutes was counted just after the temperature measuring system was set in the borehole at each depth. Stabilized ice temperatures (Ts) were estimated by the method of least squares using ice temperature data points during the first 10 minutes. The estimated errors of the T10 and Ts are $\pm 0.07^{\circ}\text{C}$ and $\pm 0.06^{\circ}\text{C}$, respectively.

Depth (m)	Temperatures after the first 10 minutes (T10) ($^{\circ}\text{C}$)	Estimated stabilized ice temperatures (Ts) ($^{\circ}\text{C}$)
